Specialist in fire rated glazing PyroEdge-20™ and PyroEdge-20 XtraClear™ have been safety tested and rated to meet or exceed all local, regional, state and federal code requirements. PyroEdge-20 is listed for use in doors, sidelites and borrowed lites as allowed by model building codes. Available in 1/4" and 3/8" tempered glazing rated for 20 and 30 minute applications without hose stream. Multiple manufacturing locations in the U.S. means fast delivery. Pyrobel™ provides the ultimate "edge" in clear fire and safety rated glazing for you and your customers. The special multi-intumescent interlayer makeup of Pyrobel offers outstanding fire protection with limited temperature rise as well as excellent acoustical qualities. In case of fire the intumescent interlayers expand at about 120° C and transform into a rigid and opaque shield effectively blocking both convected and radiated heat transmission. This ensures effective egress for building occupants as well as the prevention of fire expansion due to the spontaneous combustion of materials on the protected side. Pyrobel is safety tested and rated to meet all local, regional, state and federal code requirements. Available in 45, 60, 90 and 120 minute ratings. Manufactured by Glaverbel S.A. Imported to the U.S. by InterEdge Technologies.

Company Profile of **InterEdge Technologies**

A service of glasssglobal.com, an affiliate of glasssglobal group.
