University for Glass melting technology

产品和背景

The department of Inorganic-Nonmetallic Materials is engaged in teaching and research on technology, processes and plants for the production of innovative glass and ceramics products.

We investigate the entire chain of the production processes, starting from raw materials, processing, and shaping of products to end of life management.

One focus of our research are interface reactions, which play a vital role e.g. in

- corrosion and degradation
- composites
- conditioning of surfaces.

Surface design is the key to higher quality and opens the way to new applications.

Company Profile of Ilmenau University of Technology

A service of glasssglobal.com, an affiliate of glasssglobal group.
