## 产品/机械

There are a variety of Pilkington TEC Glass™ products to meet your specific needs, including:

### TEC 15

The best choice for applications requiring passive condensation control and thermal performance with low emissivity and clear color-neutral appearance.

### TEC 7

Offers the lowest resistivity value in the TEC Glass™ range. Combined with relatively low haze, it can be used for a wide range of applications including dye solar cells, electromagnetic shielding and thin film photovoltaics.

### TEC 8

Designed for use specifically with amorphous silicon thin film photovoltaics. This product combines the low resistivity of TEC 7 with a high haze coating required for good conversion efficiencies of amorphous silicon modules.

### TEC 35, 50, 70, and 250

For use in heated glass applications, these products combine thermal control with superior electro-optical properties.

### TEC SB

A barrier layer to avoid sodium migration into the deposited film, particularly at elevated temperatures. Therefore, the performance of an off-line coating is unaffected with the use of TEC SB as the coating substrate.

## Company Profile of Pilkington Building Products North America

A service of glasssglobal.com, an affiliate of glasssglobal group.
