产品/机械

MAGUIN's Environmental Division offers a complete range of air pollution control solutions, tailored to our customers' requirements and emission standards.

The Glass Industry is facing ever harder regulation of pollutant emission limits. Classical technical solutions are now reaching their maximum capability for meeting current and future requirements. The CERCAT® process has been developed as an option to meet glass manufacturers' needs. The effectiveness of this solution has been validated in trials in several plants.

Today, the CERCAT® technology has been chosen by major players in the field in several plants in Europe (float, tableware ...) Depending on your exact requirements, MAGUIN can also offer classical solutions such as bag filters and electrostatic precipitators.

The various solutions can include the following equipment:

- bag filter
- ceramic candle filter
- ceramic catalytic candle filter (CERCAT® Process)
- wet treatment
- electrostatic precipitator

Company Profile of **Maguin S.A.S.**

A service of glasssglobal.com, an affiliate of glasssglobal group.
