产品/机械

We are your reliable partner for repairing, start-up, inspection and maintenance of thermal processing units. We take responsibility for the repair of your furnace unit from shut down until handover in operative condition.

In cooperation with the operating company we incorporate both engineering design and technical adjustments. Specifically developed heat-up techniques and technologies, in association with 30 years of experience, vouch for an optimal start-up of your furnace unit.

A patent-registered procedure of temperature-field- visualization used within the interior process zone, accompanied by Finite-Element-Method-modelling (FEM), offer high standard security for infeed during start-up, and guaranty long lasting durability.

After start-up and handover, a first inspection provides proof of quality and is a foundation for further inspections to evaluate the condition during operative time. On the following pages we like to present our services.

Company Profile of **Franke IndustrieOfen - Service GmbH**

A service of glasssglobal.com, an affiliate of glasssglobal group.
