产品/机械

The fully recyclable high-performance polyolefin backsheets feature the strongest core layer in the industry whereas the conductive backsheets enable high-efficiency and aesthetically pleasing solar modules based on back-contact technology.

The Conductive backsheet solves a long-standing problem for the solar industry by bringing efficiency and cost-effectiveness to back-contact modules.

The bright minds at we solved the challenge by creating a super-efficient interconnection cell design featuring a unique patterning system (a pivotal part of the manufacturing process for conductive backsheets).

The result: a durable, scalable, 'lossless' Conductive backsheet that enables the highest power density and output available today, thus maximizing every square centimeter of space available on the front of the module.

Our Conductive backsheets are compatible with MWT and IBC cells - and are ready and available for mass commercial production.

Company Profile of Endurans™ Solar/ Solar Coating Solutions B.V.

A service of glassglobal.com, an affiliate of glassglobal group.
