Decoration Cutting Machinery:

Glass cutting automatic machine BIG Jack is a six-axis cutting center used to decorate glass products. Individual axes are driven by servomotors. BIG Jack is designed for machining larger pieces and can be used with either flat or rotary ones. Using its probe, it automatically measures the workpiece to ensure constant depth of cut in the variously deformed articles. It is also possible to replace its primary machining head with an auxiliary one for surface cutting, thus changing the nature of the machining. The entire control system and the program itself are developed by Bohemia Machine. Big Jack is a unique machine which, thanks to its arrangement of the positioning axes, covers the complete surface of the workpiece. The machining head can be modified according to the customer's requirements. It is possible to retrofit it with a solid table with a Z axis stroke for grinding 600x600mm glass plates.

BIG Jack is designed for decoration of glass articles on one position. The machine works with one product.

Bomma Crystal: Our in-house service covers

- Design, technical specification and product development
- Mouth-blown glass in small to oversize dimensions and highest quality
- Pressed glass production line
- Industry leading cutting technology developed in house providing: cutting services for optical lenses, technical and decorative glass.
- over 24% PbO crystal
- 92% whiteness index

Every product is quality controlled and packaged by hand in-house.
