国家	比利时

## 产品/机械

Orion Laser Tech increases the quality of your end product dramatically. With **industrial laser cutting** and **ablation technology** boasting a micron-precision laser beam, we deliver high quality end products that can be clearly distinguished from mechanical machining. There are no shape or form restrictions either. By enabling flexible positioning of the laser head, we ensure complete design freedom in both 2D and 3D. Furthermore, your machining station is virtually maintenance-free as laser machining is a 'dry process'. No water use, no dust and no flakes, lowering maintenance and operation costs.

We take great pride in our **ultra-precision positioning technology** (up to nanometres), made possible by inhouse developed and produced motion systems. Our own produced and developed bearings enable a high level of customisation for our clients. We provide tailor made stations, increasing your work surface and allowing for nesting. This enables you to reduce residual waste to a minimum and to eliminate several intermediate steps in your production process.

### Company Profile of Orion Laser Tech

A service of glasssglobal.com, an affiliate of glasssglobal group.
