国家	阿拉伯联合酋长国，阿联酋

产品/机械

GRIP 260-SILIGLASSL This system arranged and developed by SOMEK, is based on the structural gluing technique of the the panels, for the construction of traditional transom and mullion curtain walls, with interchangeable cells and frame-panel silicone retaining system. The structural sealing is completely controlled from within the Company, under a constant manufacturing process quality control. An automated and mechanical controlled system is used, which besides limiting process time, reduces the number of production steps and consequently lowers the risk of faults and defects that could arise in case of multiple cycles. After contemporary entry of glass, frame and sealant material, the industrial process issues forth the final product which is characterized by maximum technological quality and high aesthetic value. The SILIGLASS system gives to the curtain wall an aesthetic effect of high elegance and formal cleanliness, without any metal profiles or grid elements visible from the outer side. The profiles can be either cold section or thermally insulated (thermal break). All sashes (glazed and spandrel) are hung with the possibility of being openable according to customer or design requests.

Company Profile of **Somec Sharaf Middle East LLC**

A service of glasssglobal.com, an affiliate of glasssglobal group.
