GED Integrated Solutions is the progressive system solutions provider to the global window & door industry. We are committed to partnering with our customers and providing to them innovative solutions aimed at increasing their product quality, expanding their operational capacity, and significantly reducing their overall manufacturing costs.

产品和背景

From its humble beginning on a back porch in 1977, GED Integrated Solutions has moved to its current rank as the state-of-the-art contributor to the glass industry through the determination of its co-founders, Dick Dietrich and Edmund Leopold.

Having staked their claim in the North American residential window industry, the two provided window and door fabricators with technologies that increase productivity, reduce insulating glass unit costs, and improve IG quality.

In 1977, during our first year of operation, GED introduced the first Horizontal Hot Melt IG Fabrication equipment, making possible the first high-volume IG Line. The equipment allowed a fabricator to produce over 2000 units per eight-hour shift.

In 1987, GED brought to market the first Break-Out Monitors for sorting cut glass into movable slot sorting racks. This GED innovation opened the market for computer-controlled glass cutting, increasing control and decreasing scrap. Soon afterward, the WinSystem 1 software platform completed the integration of the IG department ensuring better output and organization of production.

Technological advances such as these caused PPG Industries, Inc. to turn to GED as its manufacturing partner to bring you the revolutionary Intercept® IG Spacer System.

Through continuous improvement initiatives combined with a cellular manufacturing approach, GED has become the most efficient equipment manufacturer in the window and door industry. It was GED's reputation for efficiency and quality that led 3M Corporation to choose GED as its equipment manufacturing partner to produce the GED Application Table for 3M™ Accentrim™ Products, a unique technology that creates a unique optically divided lite visual to differentiate your products.

GED continued innovations with the introduction of numerous award-winning products in the new millenium including the Smart Extruder, Laminated Glass Cutter, 3M Accentrim Products application systems, two-tone muntin material, a completely new glass washer and water treatment system and the revolutionary i-3 technology platform.

In 2004, GED greatly expanded its reach with the acquisition of Sampson Automation to create GED Integrated Solutions. We are now the only complete solution for the window and door marketplace. The i-3 system is truly world class manufacturing.
