Mission

Light is one of the most fascinating phenomena.

Precise knowledge of its properties and the ability to make these usable for scientific analysis in industry and research with unique optical components and assemblies has been the driving force of Hellma since 1922. However, we don't just set standards as a global market leader for glass and quartz cells.

Today we are also an industry leader wherever highly precise optics for scientific analysis are needed and in all situations where technologically demanding customer requirements need to be fulfilled. Whether with our fibre-optic systems, our measuring cells with highly precise channel structures or our calibration standards for spectrophotometers, as soon as requirements exceed usual demands, our products are to hand – from the earth to outer space.

Our success is based on a number of factors. Our exceptional skills in glass production, the constantly growing innovative power of our researchers and developers, as well as our well-balanced company policy, which serves the high aims of Hellma: dedicated staff, consistent quality and a respectful treatment of the environment.

Company Profile of **Hellma GmbH & Co. KG**

A service of glasssglobal.com, an affiliate of glasssglobal group.
