Innovate your next generation of Glass Tableware with Kastus

Kastus for Glass Tableware

In the new normal, consumers and businesses are concerned about using shared surface items such as glass tableware for fear of being exposed to surface bacteria and viruses.

Kastus technology starts working immediately against viruses and bacteria on first contact. Our patented 24/7 antiviral and antibacterial coating for glass tableware offers enhanced protection, helping consumers and staff feel safer when interacting with these products.

Kastus' coating technology is independently proven to kill >99% of viruses including human coronavirus and harmful surface bacteria.

Our intelligent protection technology can be spray applied in-line and during the thermal strengthening process. The high temperatures will not only strengthen the glass, but also cure the Kastus coating, sintering it into the glass surface to create a super durable physical bond. A large range of glass tableware can benefit from this protection, such as glasses, bottles, plates, jars, bowls, mugs, food containers and others.

Company Profile of **KASTUS**

A service of glasssglobal.com, an affiliate of glasssglobal group.
